

**The best sourcing solution
under the sun.**

Specialized. Out-of-date. Obsolete. Impossible to find.

No problem.

Imagine: Sound procurement experience coupled with best-of-breed business practices and a unique vision of excellence to create a company that is fast enough, responsive enough, and knowledgeable enough to provide the quick turnarounds and cost effectiveness critical to your operations. It is our goal to be recognized as your firm's ideal partner in parts acquisition.

Who Are We? We are a tightly-integrated team of procurement professionals with extensive experience in parts sourcing for the power industry. Over the course of the last twelve years, key members of our team have successfully worked with a variety of the nation's leading utilities, including AEP, LaSalle, Dresden, Wolf Creek, TVA, APS, FP&L, and many others. In the course of our individual endeavors through other companies, it became apparent to us that there was a better way to provide vital sourcing services. That's why we founded SunSouth.

Registered in El Paso, Texas, SunSouth incorporates departments dedicated to customer service, research, procurement, administration, and shipping, each staffed by capable specialized professionals dedicated to the provision of first-class service.

What Do We Do? SunSouth assists nuclear, coal, and hydroelectric power companies with the location and procurement of parts, components, and systems at times of critical need. We specialize in finding and securing those parts and systems which, through obsolescence, long lead times, are particularly difficult to locate. We support all ongoing new construction, package modification, operation, and outage related requirements, striving for speed and cost-efficiency, working to help your company avoid costly design changes, while fulfilling your mission: the safe generation and provision of power.

How To Reach Us... It's easy. SunSouth professionals are on call 24 hours a day, 365 days per year. Your customer service representative will make sure that your order is completed quickly and accurately, and that the parts you need are readily available. Call us at (810) 427-4819, or fax us at (413) 702-6755, and find out just how easy and inexpensive the procurement process can be.
